

Complete control and management
for Vending and Dispensing

Compendia

Jofemar

Global solution for products vending or dispensing

Compendia

Compendia Integrates

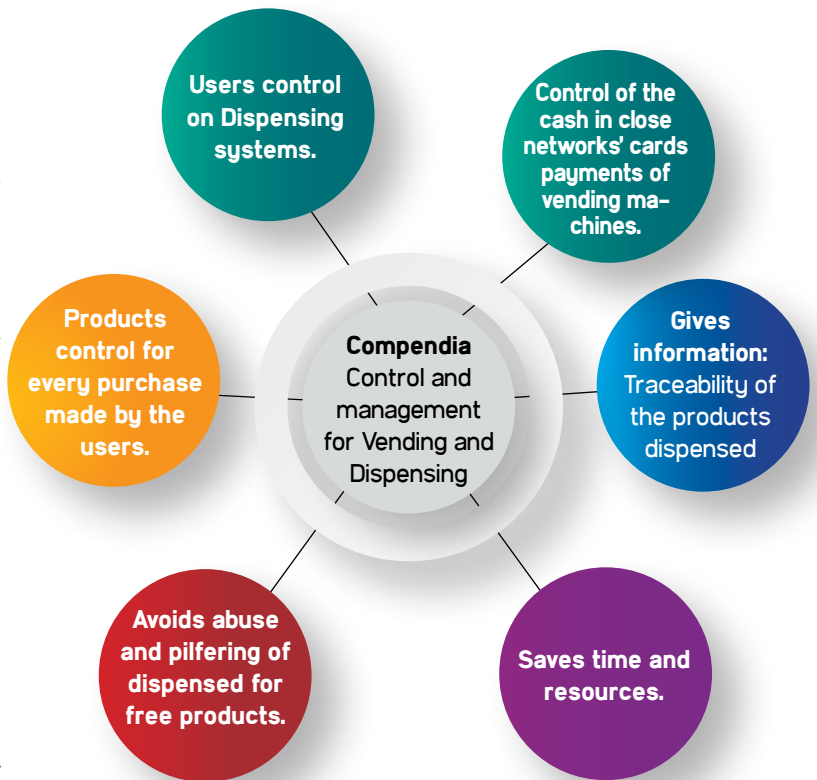

The Compendia system is a complete solution to the needs on controlling product payments and dispensed products in places like sport clubs, hotels, learning centres or working centres.

With this system is possible to automate all the transactions for products or services on this kind of locations, offering full traceability on real time and allowing customizing the possibilities for product consumption to each user.

The system management is made from a centralize server which maintains the whole control of every sales points, being able to access to its data from the central location or remotely.

The communication among the full system is made on real time or periodically depending on the project needs. This way is possible to offer to the location administration a fast and precise management of all services.

Although Compendia is specifically aimed at controlling products dispensing and card payments in close environments/ at closed loop, it can be used as a data transferring tool for VendingTrack. Through this latter system, vending machines can be managed more efficiently.

Compendia

Complete control
and management for
Vending and Dispensing

Compendia
offers

HARDWARE

ID-SYSTEM

ID Cards

- Contact chip cards.
- Contact-less radiofrequency card (RFID)
