Convenience and  
reliability in  
card/key reading

The Jofemar J130CK card/key reader system is the most complete and profitable non-cash payment system, as it allows transactions from the RCID chip card and the RCID key, both systems in the same reading terminal.

Apart from offering the customers convenience and greater reliability and security during the process, the reader achieves the maximum profitability in regular consumer situations by means of 100% Jofemar developments that allow recharging cards and an optimal management of machines and stock.

#### FEATURES

- Unlimited number of cards and keys, programmable by the operator.
- Detailed control of recharges and sales of up to 65,500 consumers.
- In Jofemar machines, the terminal allows programming all the operations and the management of stock control and accounting (exclusive RS232 communication).
- Programmable account closing.
- Three encryption levels to guarantee security against fraud attempts.

#### COMPATIBILITY

- Compatible with both Executive and MDB vending protocols, the same card reader is adaptable to both systems by changing its internal program.

#### STRUCTURE

- Quick jam and strange object clearing thanks to the mechanics and components easily accessible from the inside.

#### CREDIT MANAGEMENT

- Credit assignment or temporary or specific free sales programmable by the operator.
- Recharge bonuses.
- Different user levels with programmable assignments by level.

#### PROGRAMMING

- Operation mode programming and vending machine and executive module management with Jofemar developed software.
